## **DETAILED ACTION**

### ***Response to Amendment***

1. The reply filed 03/12/2007 was applied to the following effect: All relevant objections and rejections are withdrawn as being satisfied.

### ***Reasons for Allowance***

2. Claims 1; 8, 11 and 31-37 are allowed (renumbered as 1-10, respectively).
3. The following is an examiner's statement of reasons for allowance:

This application is for a HEAD SLIDER WITH PRECISE POSITIONING ACTUATOR AND MANUFACTURING METHOD OF HEAD SLIDER.

- **Claims 1 and 33** specify a head slider with a precise positioning actuator, which requires:

*"a static part coupled with said base between said pair of movable arms to form an E-shape and the static part spaced from the head section."*

The closest prior arts of record, Yanagisawa (US 6,487,045 B1) and Novotny (US 6,289,564 B1) fail to teach, show or suggest, by either anticipating or rendering obvious, the invention as set forth in the claims of the instant application. Furthermore, a search made does not detect the combined claimed elements as set forth in the pending claims. Additionally, the reasons for allowance of the claims over the prior art of record is believed to be readily clear, self evident and apparent from the claim language set forth in each of claims 1 and 33, when compared and contrasted with the prior art.

More particularly, the instant invention (as set forth in claims 1 and 33) provides for head slider with a precise positioning actuator has a static part coupled with said base between said pair of movable arms to form an E-shape and the static part spaced from the head section.

Yanagisawa '045 discloses an actuator section [14] for precisely positioning said at least one head element [col. 8, lines 62-64; Fig. 1].

Novotny '564 shows (a) a pair of movable arms [42a, 42b] capable of displacing its top end portions in response to a drive signal applied to said actuator section, both of said side surfaces of said head section being fixed to said top end portions of said pair of movable arms, (b) a base [24] to be fixed to a support means of said head slider, said pair of movable arms extending from said base along said air bearing surface, and (c) a static part [44] coupled with said base and formed between and spaced from said pair of movable arms [col. 3, lines 49-52; col. 4, lines 5-11; Fig. 2]. Novotny '564 also shows each of the pair of movable arms comprises an arm member [60], and a piezoelectric element [68] formed on or fixed to a surface of said arm member [Fig. 5, which displays one side of actuator section 42a].

None of the cited prior art of record above disclose such a head slider with a precise positioning actuator as set forth in the manner, function and relationship relative to other claimed structures as prescribed by the independent claims.

Therefore, these features, in combination with other features of claims 1 and 33 are not anticipated by, nor made obvious over, the closest prior arts of record of Yanagisawa (US 6,487,045 B1) and Novotny (US 6,289,564 B1).
